

Assignment 5 - Decision Structures and Boolean Logic

AllyBaba Furniture store wants to calculate the price of desks sold. The price of the desk is based on the square footage of the desk.

Conditions:

- If the area of the desk is less than 1000 sq. ft, the cost is \$100 per desk
- If more than 1000 sq. ft, the price is \$125 per desk.

The store clerk will enter the number of desks ordered. It will find the length and width of each desk. The program will calculate the cost of each desk and the total cost

Make sure to include appropriate labels.

Create the following functions

```
main()
getData()
processData()
printData()
```
